

### *Conceiving the Superpuzzle*

who had defended Miss Annabelle and Mr. Melbourne during the criminal lawsuit. The former students had never met him. Rico introduced him as the first lawyer who cut through the hopelessly decaying legal profession to a career of pure honesty.

"It was so difficult because pure honesty in my profession starts with exposing the judges," Salinski began. "It's not *pure* honesty if you don't expose the judges' ego-justice, and the judges control a lawyer's career. My decision of pure honesty almost caused me to starve. After defending Miss Annabelle and Mr. Melbourne, the judges punished me in trial after trial because I had exposed ego-justice. They were out to squash me like a bug. Judges are like a special fraternity, and word got around. I couldn't win a case in court for two years. The prosecuting attorneys would not settle because they knew they'd win in court. They had all the leverage. Clients rightfully abandoned me because I was a losing cause. Potential clients stayed away. I had no income for nearly a year.

"One day, I read in the paper about a small entrepreneur whose business was destroyed by the IRS. Moreover, he faced criminal charges. No trial lawyers would defend him — they were all afraid of the IRS, especially the Criminal Investigation Division. Besides, the IRS froze all his accounts; he had no money to pay a lawyer. So, I called him. I was right: he had no money, but I said I would defend him anyway. I explained my situation and that my defense would be a totally different approach based on widescope accounting and pure honesty. He had nothing to lose since he was going to prison anyway. So, he agreed to my radically different approach. We were both at our lowest points; we were both ready to thrive on exposing the evil that put us there. ...Well, that was my famous Golden Helmet trial and the turning point of my career."

Jake listened in fascination as Salinski told the story about the start-up entrepreneur who could not squeeze the cash out of his small company to pay his corporate taxes. He could not get the cash out because it was tied up in inventory and other assets. Although his company had made nearly \$200,000 in profits, he had no cash. By the time this small businessman could clear the cash to pay the IRS, it was nearly time to do the next year's taxes. Of course, the same thing would happen again and again,

### *Earth's First Immortals*

each year. What do I do? he worried. He had sleepless nights fretting over his dilemma with the IRS. The compounding fear and uncertainty of how to handle the situation caused the start-up entrepreneur to never get into the system. He just did not know how to handle the dilemma, and the IRS caused too much intimidation for him to sit down with them and figure it out. He just never knew how to get in the system with his cash flow problem.

Salinski did not defend the fact that the original entrepreneur had not gotten into the system. Instead, he turned to wide-scope accounting: to the contribution struggling start-up entrepreneurs make to society and the net gain not only to society, but to the *IRS itself*. This start-up entrepreneur, with every penny of profit needed for inventory and assets to keep the business functioning, employed fourteen full-time employees. All fourteen were paying personal income taxes. In the early stages of this and any fragile infant company, cash flow was its nutrition, and every penny was needed for its demanding growth. To suck out cash each year for profits that show up on the books only, profits completely reinvested to keep up with a baby company's growth, would starve the baby and kill it. The fourteen jobs and potential hundreds of jobs would die forever. And this baby was the most precious entity of any economy — this baby job creator who should be able to grow up and create not 14 jobs, but hundreds of jobs (all paying income taxes). Job creation, Salinski emphasized, is the greatest value one can contribute to society...and it is the greatest gift to the IRS itself.

Through his passionate delivery, during the Golden Helmet trial, Salinski was able to move the jury. Jake could see why: In just a few minutes today, Salinski demonstrated that the carnivorous Criminal Investigation Division that raided, ravaged, and destroyed the small publishing company was really preying on a baby business for the benefit of the beast's own ever-growing appetite to support its agents of force. The Golden Helmet was a metaphor: the precious start-up entrepreneurs would wear the Golden Helmet to protect them from the beast. The start-up entrepreneurs must be left alone by the beast during the ever so fragile early years of feeding their baby companies with precious assets so the baby can grow. The seedling companies

### *Conceiving the Superpuzzle*

pay the greatest value to society and to the IRS by creating jobs.

This particular entrepreneur Salinski was defending was completely willing and wanting to work out his debt to the IRS, but the CID did not care about that. That Criminal Investigation Division used the opportunity to pounce and prey upon the defenseless baby company, raiding it with sixteen armed agents and breaking constitutional rights without any accountability or recourse. The IRS ripped the baby apart and ate it alive.

"In my closing argument," Salinski was saying, "I asked the jurors to ask themselves if they ever entertained the thought of starting their own business. I said if there was even a remote chance that they just might consider someday starting their own business, then they must protect themselves and their families *right now* — this was their chance right there and then to protect themselves by placing the Golden Helmet on the defendant and setting him free. I said, 'He's not a criminal; he's a hero! He's what makes society exist! Every business, every job you, your children have ever had started because of this kind of hero: the rare person who goes through the labor of giving birth to a business. That person works long days and late nights to bring prosperity and jobs to society. We must preserve and protect those rare benefactors to society and must never, *never* let the beast destroy them!'"

Jake instinctively shouted "Yeah!" and stood up, clapping his hands hard. Everyone in the room was cheering. Man, Jake thought, this Salinski can move a crowd. But it was no act. He was so dynamic because he dissected justice and injustice at the heart. No sound-good politics, no look-good illusions affected Salinski. He was a true doctor of justice who went right to the heart of the matter. His ability to cut through hundreds of years of illusions built through politicization of society was breathtaking. For Salinski, justice overpowered anything else in the courtroom including the judge, which made Salinski unrelenting at battling injustice at all costs. Jake knew that any jury listening to Salinski would feed on his fearlessness and strength that stood up to tradition and the Establishment. The famous Golden Helmet trial rocked the nation as the jury ignored the ego-instructions of the federal judge and ignored the political

*Earth's First Immortals*

laws and came back with a not-guilty verdict on all counts.

With that historical verdict, Salinski became the small businessman's hero. Judges feared him because he could overpower their ego-justice influence over a jury. Moreover, he could often overturn a trial in the higher courts, putting a ceiling on a district federal judge's career. Young idealistic lawyers from around the county wanted to come and work for Salinski. He hired a number of those young lawyers and developed a whole new approach to law called Widescope Accounting Law. Widescope Accounting Law, for the first time, went toe to toe against what had previously seemed to be an unstoppable, decaying legal system that ignored honesty, replaced by talented battles among skilled lawyers. Before long, when traditional lawyers went after value producers and ran into the new Widescope Accounting Lawyers — WAL nicknamed *the wall* — for the first time the value destruction stopped in its tracks...like running into a brick wall. For the first time, the legal process was shifting: toward supporting and upholding the value producer instead of envying and destroying him.

WAL was so effective because it would expose the envious, inadequate souls of those pressing the regulations or lawsuits against benevolent value producers. WAL cut through the illusions of politicians, regulators, tort lawyers and their "compassionate" souls. WAL cut through the matrix of illusions to show what nasty people those charming-in-appearance people really were. Before long, politicians, regulators, agents of force, prosecuting attorneys and judges secretly feared going against WAL because their own souls went on trial. The prosecutors became the prosecuted.

Salinski's Widescope Accounting Lawyers became so effective at exposing the agendas of those who attacked value producers that government agents and other value destroyers steered clear of businesses represented by WAL. As a competitive result, small businesses all over the country were hiring protection from WAL at a rapid rate. Salinski's WAL became the fastest-growing legal practice in the country's history.

WAL was the first and only legal practice that refused the manipulative truth oath that led to a dishonest chess game of "truths" taken out of context by talented lawyers. Instead, WAL

### *Conceiving the Superpuzzle*

created the *honesty oath* that allowed its lawyers to adhere to honesty, which gave them the freedom to put every out-of-context "truth" into full and complete context. The honesty oath replaced the words "I swear to tell the truth..." with "I swear to speak with fully integrated honesty...". The Ninth Circuit Court of Appeals ruled in favor of the Honesty Oath, which became the only oath WAL recognized.

I'm sitting among geniuses, Jake thought. No...it's something different. These people...what is it? *What is it?*

Mr. Melbourne was asked to talk next. What a good-looking man, Jake thought. In his sixties, he maintained his hard-body outdoors look. He was slim with broad shoulders and old-fashioned, dashing movie-star looks.

"Well, I look around the room at you, twenty-six years after I last saw you, and I am so moved by what I see. Do any of you remember that picnic you had with my wife near the end of our school year together, when I joined you in the afternoon?"

Jake looked around. The former students were smiling and nodding.

"I told you then that you were different. Your minds were working in a different way than your schoolmates in the other classes. I was still writing my book about that new mentality, which I then called the mind of the future and, later, *Neothink* for new think. In the third grade, you were already showing signs of the new mentality. Today, you are showing the world the next level of values achieved through living the new mentality. With Neothink, you have surpassed intelligence and its two-dimensional, linear arrangement of thoughts. You have formed a new mind space created through building four-dimensional, mental puzzles that take you to the next level unreachable through intelligence alone. Now, you might wonder, why did I jump from two-dimensional to four-dimensional? While building your mental puzzles, a point came for you when you saw what the puzzle-pictures looked like when complete. That never-before-seen puzzle-picture, that you were building, was the future. You conquered the future — the fourth dimension of time. Indeed, once you saw that puzzle-picture in your mind, you knew exactly what the missing pieces to the puzzle-picture looked like, thus you knew with omnipotence exactly what to

### *Earth's First Immortals*

do to complete the puzzle and create your future. Again, you conquered the future. And by conquering the fourth dimension, with the future puzzle-picture now your guide in life, you no longer needed external authorities to tell you how to live.

"When the people all around us evolve into Neothink and guide themselves through this new mind space that creates their futures and paves their roads in the present, then the institutions of external authorities will collapse because people will use the authority of their own minds in charge of their own futures. That means governments and religions, both built on external authorities, will collapse as we know them. They will be replaced by structures that serve objective law and spiritual harmony that have no basis in external authority. In fact, two examples of those new political and religious structures already exist, both built through Neothink puzzles by two people in this room: the Neo-Tech Party by Daniel Ward and the Church of God-Man by Jeremiah Jones. Only their version of politics and religion will survive mankind's final evolution into Neothink."

Mr. Melbourne went on to explain that Neothink was man's second great leap of power as significant as his first leap of power from the automatically reacting "animal" mentality of the bicameral man into human consciousness three-thousand years ago. "When the masses leap into Neothink," he said, "the world will advance into financial and emotional prosperity beyond anything we can try to imagine now. What would the world be like if hundreds of millions of people created values at the level of you twelve?"

Jake's mind started wandering as he wondered, "What will that world be like?" He fancied the thought of the whole world filled with hundreds of millions of geniuses like those in this glass house. Moreover, they would be free of debilitating politicization as governments and theocracies came crashing down. Just what would the changes be? The thought was so titillating, Jake missed a portion of Mr. Melbourne's talk. When he caught himself daydreaming, Jake scolded himself, for he knew he should not miss one word from the mouths of geniuses like these.

"Underlying this Neothink mentality is total and complete

### *Conceiving the Superpuzzle*

honesty with oneself to see and act on reality," Mr. Melbourne was saying. "If you cannot see through illusions created by external authorities or created by your own internal feelings, investments, or desires, then you cannot snap together reality, because illusions fall apart into nonrealities — into nothing. You cannot make the leap into the new mind space of building Neothink puzzles, for a person can only snap together reality to steadily build a mental puzzle called Neothink. He cannot snap together illusions because they disintegrate into nothing and no puzzle builds; so the ordinary person today never enters the new mind space of Neothink...he can never build a puzzle to reveal a breakthrough puzzle-picture. He has no power in life. If he could pierce through appearances to the essences, he would discover what you have discovered...the opposite of his boring life: the world of exhilarating stimulation. His growing puzzle-picture would take him to the next level — never reached before in his endeavor — by knowing what the missing puzzle pieces looked like to the prosperous future he's created in his mental puzzle. Through hard honesty used to cut through appearances to the essence of things — to reality — one can begin snapping together knowledge and building real mind puzzles. I was so very impressed the first time I watched you twenty-seven years ago...you were eight-year-old kids building mental puzzles! Then I learned your teacher's secret: she persistently cut through appearances to the essence of things — to reality — in her general lectures. We all know what trouble that got her into with the school board. Her relentless integrity to reality created some shocking lectures, such as the one with Ian questioning the existence of God...or the early lecture about love. It was her integrity to honesty that led to our twenty-six-year separation from you, whom we loved more than anything in this world.

"Well, what happened to your teacher and to Bruce Salinski are examples of how difficult this consistent and complete honesty is in our world, in our anticivilization. People become ostracized and punished. But that'll change. As also exemplified by you, your teacher and Bruce, the competitive advantages will take over. You and your successes are microcosms of what's to come worldwide.
